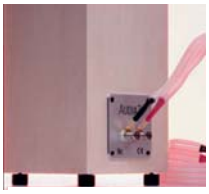
The design aim behind the Eta model was to produce a compact floor standing loudspeaker that was non critical in its placement within a living room environment.
The Eta can be placed close to walls due to its Bass reflex design and is especially suited for small to medium size listening rooms.

.

Even the smallest speaker in the AudiaZ product range benefits from the uncompromising approach to material selection. There are no compromises.

The combination of a heavily braced multiplex cabinet, the best available crossover parts, a specially designed silver solid core Teflon cable and the best drivers available on the market have allowed AudiaZ to develop on entry level speaker with extraordinary sound capabilities.
An exact soundstage with precision and tonal balance being the reward



- **Extremely rigid cabinet to avoid resonance**
- **Suitable for close wall or free standing operation**
- **Made to individual specification**
- **Uncompromising choice of materials used for this entry level speaker**
- **Ideal for small to medium size locations**
- **„Handmade in Germany“ exclusively built out of components “made in Germany”.**

‘The AudiaZ Eta projects a wide and exact soundstage, is easy to integrate into the living environment and is in another league to nearly all its competitors in regards to its detailed resolution and the ease of reproduction.

You get lost in the music, opening new dimensions.’
(Hifi& records2/04 Stefan Gawlick)

Set Up:	3 – Wege, Bassreflex
Drive Units	HF AMT / 20mm Diamant
	MF 100mm ceramik
	LF 2x 150mm ceramik
Sensitivity	89 dB/W/m
Frequenzy Res.	38 Hz bis 100 kHz
Impedance	6 Ohm
Amplification	from 25 Watt Class A
Dimensions	Width: 210mm
	Hight: 1070mm
	Depth: 210mm
Weight	22kg per unit

Options

Copper Edition (standard)

The crossover components used are made of high purity oxygen free copper with a special crystal lattice structure.

Silver Edition (upgrade)

For the customer who wants the ultimate performance utilising high end materials, the copper crossover components (Foil coils, air coils, capacitors) are replaced with solid silver equivalents to achieve the last percentile in sound improvement. Please enquire about prices and availability.

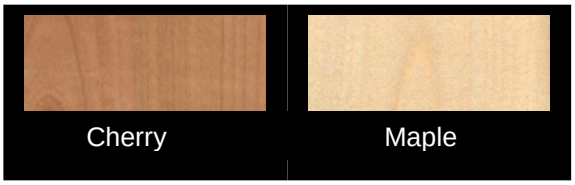
Diamant HF driver

The Eta can be ordered with a 20mm Diamant Tweeter instead of the AMT maximising the speakers potential.

Edition Nero

The ceramic membranes are also available in black on request. This alteration is purely visual and does not change the sound attributes.

Standard Veneers



Veneer treatment

Oil and wax treatments have a natural look and feel in comparison with glossy lacquers.

- Oil: pronounces the grain of the wood
- Wax: lends a satin feel and look

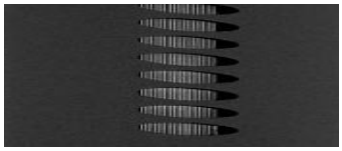
Options

- Other veneers possible, please enquire.
- Pianolacqure, please enquire
- Colour paints, individual on customer demand

Silver / Teflon cables

- Surface polished solid core silver
- Dielectric: expanded Teflon

Air Motion Transformer



- Very dynamic
- High resolution
- Low distortion

Multiplex cabinet

- Lower resonances than solid wood or MDF
- Resonance frequency of the cabinet does not overlap with the driver frequencies.
- The cabinet shape minimises vibrations.
